writes back to se n is made possible arVision cation happens using-	NA	•Checks trade breaks	•Generates different reports such as client reporting GOLD, Sparta- cus

CHALLENGES

- Time zone difference
- Bulk allocations
- Market cut-off times
- Multiple regions, markets as well as brokers

NA

- Time zone difference
- No way to check or know if allocations sent by clients are accurate
- Approaching market cut-offs
- Multiple clients, trades, markets as well as regions

OPPORTUNITIES

Seamless channel for sending allocations

NA

Reducing manual intervention which is otherwise spent on email or phone while chasing clients  
Easing out load for managing multiple entities and cut-offs

	<ul style="list-style-type: none"><li>•GMI)</li><li>•Trade break rectification initiation</li><li>•Creates static, accounts and rules</li></ul>		Clearvision	
	<ul style="list-style-type: none"><li>•Supporting various formats in which FTP files are recieved</li><li>•Converting all files into a consumable format by NVision</li></ul>	<ul style="list-style-type: none"><li>•Invstigating exception breaks in NVision</li><li>•Delays in clearing due to long lead times from client's end for going forward with allocations</li><li>•Managing top day clearing before cut-off</li><li>•Managing mailbox</li><li>•Managing communication with different stakeholders</li><li>•Manually entering allocations received via email</li><li>•Managing risk and errors related to the same</li></ul>	<ul style="list-style-type: none"><li>•Does not have a way or system in place to validate allocations sent until T+1</li></ul>	
	Inclusion of a unified and standardized format	Manual intervention could be reduced for allocations via email or phone
